### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a method of recovering information encoded in a spread spectrum signal transmitted in a communications medium. Prior art references show similar methods (Wang et al. US Patent 6,125,137 and Cahn et al. US Patent 6,198,765) but fail to teach: "a method of recovering information encoded in a spread spectrum signal transmitted in a communications medium, the method comprising. receiving at least one multipath version of a composite signal including the spread spectrum signal from the communications medium; selecting a set of time-offsets; correlating the composite signal with a spreading sequence at each of the time-offsets in the set of time-offsets to produce a first set of time-offset correlations of the composite signal with the spreading sequence; correlating the composite signal with a traffic spreading sequence at each of the time-offsets in the selected subset of the time-offsets to produce a plurality of traffic correlations; combining the plurality of traffic correlations using a weighted combination to estimate information encoded in the transmitted spread spectrum signal", by using **"estimating noise correlation among the time-offset correlations to produce noise correlation estimates; selecting a subset of the time-offsets from the set of time-offsets based on the noise correlation estimates"**, as in claims 1, 25, 28 and 36. Cahn et al. however discloses a noise correlation estimation based on the time of arrival of multipath signals, as early and late correlations. **"a noise correlation estimation circuit that estimates noise correlation"**, as in claims 30 and 43.
